

# SAURI

*Sauri, born from the modernism idea of "less is more", reconstruct the minimalist geometry into residential space, from the undefined light-emitting direction and geometric shape, to the undefined space and residents.*

*The LED part of the lamp adopts a unique optical reflecting design, creating bright, pure, upper and down dual lighting, anti-glare and uniform. The upper light is warm and soft, diffusing the space above and the down light is powerful. The fixture extend the ray while lighting the field.*

Sauri
